

Gabriel Quintans, Sweden/Spain

Intern at Paul Scherrer Institute (PSI), Villigen, Switzerland

August 2020 – October 2020

To be an intern during these challenging times of COVID-19 is not a trivial task, but to do it in a company that takes local authorities' recommendations seriously is certainly a relief. While working in the Battery Materials and Diagnostics group in Paul Scherrer Institute, I was always confident that our work was performed to the best of our knowledge regarding contamination prevention. In fact, contrary to my expectations, the quality of work was not by any means affected. With the right turn planning on using the lab and performing measurements, I managed to be part of a very successful project that not only taught me extremely valuable skills regarding electrochemistry research but also opened a big set of career possibilities for my future in the field. Thanks to this time in PSI and the contacts I made, I have right now a handful of possibilities for my next professional step. I have nothing but gratitude to IAESTE Switzerland for providing all the support I needed at all times of my stay and hope more technical students will have the opportunity of living an IAESTE experience at some point of their career.
