

IAESTE internship in Malta, July-August 2022

Yuchen Zhang, University of Zurich

Work

During the internship, I worked in the ICT faculty of University of Malta. I really appreciate the chance to work on the computer vision topic with access of nice depth cameras provided by the faculty. The professor gave me no restrict to explore approaches in different papers and apply them with real dataset created by myself. It was nice to meet my colleague who helped me getting familiar with the working context in a short time.

Culture & Being Abroad

Malta is a very international and friendly place. It didn't take me long to get myself comfortable with the surroundings.

I had many free time during my internship, so was able to explore as much as I want. In the Malta Island, it's amazing that you can rush to the beach right after work. The blue lagoon and st. peter's pool are absolutely beautiful and I had chance to go to some nice but not famous spot guided by our Maltese colleague. The food there are diverse and delicious and I especially like their ftira sandwich. I also tasted wine made from special local grapes in our wine and chocolate trip.

IAESTE

The application process supported by IAESTE Switzerland is efficient and professional.

And the IAESTE Malta community made us feel welcomed and alive. There are get togethers organized every week with the interns from different countries. It is really a pleasure to develop friendships with them. The boat party is unforgettable. Apart from that, I also had fun with my intern roommates all around the beautiful island.
